

Case Study

Providing Clinical Homecare Nursing Services for Vaccine Study in the UK

Background

Wren Healthcare, a WEP Company, is a clinical nursing solutions provider that offers Nursing Services for Sponsors and CROs running Decentralized Clinical Trials globally.

Wren's specialist team of homecare nurses are highly trained and have years of clinical homecare experience across a broad range of therapy areas.

A range of protocols and procedures can be carried out in the patient's home, from collecting blood samples to administering complex IMP via infusions.

Challenge

Wren was approached by a National research organization in the UK that needed help providing home healthcare visits for patients enrolled in one of their vaccine studies.

Solution

Our Wren Nursing team was responsible for carrying out a number of procedures in the home, including:

Clinical Observations

Sample Collection

Sample Delivery

Outcomes

1

Quick Turn Around Time

Our nursing team ensures that patients are seen within 48 hours of reporting symptoms.

2

Full Integration into Site Team

Wren has become an extension of the study site team – not just service provider.

3

Serve a Vulnerable Patient Group

Allow elderly patients to remain in their homes and receive treatment.
